### **EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Scott Born on 23 May 2008.

The application has been amended as follows:

#### **In the claims:**

a. Please replace the text of claim 1 with the following:

--1. (Currently Amended) An electrode for contacting an electrically conductive surface of a photovoltaic element, the electrode comprising:

an electrically insulating optically transparent film;

an adhesive layer provided on a planar surface of said film; and

a plurality of substantially parallel, electrically conductive wires embedded into said adhesive layer, wherein said plurality of wires lies over said planar surface of said film and wherein said adhesive layer has a thickness less than a thickness of said wires embedded therein, wherein a part of the surfaces of said wires protrudes from the adhesive layer and wherein at least said part of the

surfaces protruding from said adhesive layer are covered by a coating consisting of an alloy having a low melting point, to facilitate soldering said wires to said electrically conductive surface and to a first terminal bar.--

b. Please replace the text of claim 39 with the following:

--39. (Currently Amended) An electrode for contacting an electrically conductive surface of a photovoltaic element, the electrode comprising:

an electrically insulating optically transparent film;

an adhesive layer provided on a planar surface of said film; and

a plurality of substantially parallel, electrically conductive wires having lengthwise surfaces, said plurality of wires being embedded into said adhesive layer, wherein said plurality of wires lies over said planar surface of said film and wherein said adhesive layer has a thickness less than a thickness of said wires embedded therein, wherein a part of the lengthwise surfaces of said wires protrudes from the adhesive layer and wherein at least said part of the surfaces protruding from said adhesive layer are covered by a coating consisting of an alloy having a low melting point, to facilitate soldering said wires to said electrically conductive surface.--

c. Please cancel claim 40.

2. The following is an examiner's statement of reasons for allowance:

The claims are considered allowable due to the limitations that the plurality of wires lies over a planar surface of the film and that the adhesive layer has a thickness less than a thickness of the wires.

The claims are not anticipated or rendered obvious by Little, which requires the plurality of wires to be pressed into the surface of the plate. Pressing of the wires into the softened plate surface (Little, Column 8, lines 4-17) results in the plurality of wires lying over a surface having indentations corresponding to the wires, as opposed to the instant planar surface. Although planar surfaces of the plate exist between the wires, the plurality of wires, taken as a whole, cannot be reasonably construed as lying over a planar surface of a film.

The claims are not anticipated or rendered obvious by Nath et al because of the limitation that the adhesive layer has a thickness less than a thickness of the wires. Nath et al requires the adhesive layer in which the wires are embedded to be at least as thick as the wires, and certainly, if the adhesive were to be thinner, the surface of the film of Nath et al would cease to be planar as required in the claims.

For these reasons, the claims are deemed to be patentably distinguished from the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

Art Unit: 1795

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dr. Jeffrey T. Barton whose telephone number is (571)272-1307. The examiner can normally be reached on M-F 9:00AM - 5:30PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nam Nguyen can be reached on (571) 272-1342. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
